## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Madsen (US 6761718). Madsen discloses an apparatus and method for making a hole of a first predetermined diameter in a dura of a patient comprising a catheter (2), a stylet (21) having a first end (23) adapted for insertion in the lumen and a second end. The apparatus also includes a means for applying electrical current to the stylet and the tip also has a hemispherical shape as illustrated in figure 4 adjacent to reference number (68).

### Response to Arguments

Applicant's arguments filed 2/4/05 have been fully considered but they are not persuasive.

#### The apparatus claims

In response to applicant's argument that Madsen et al. is not for making a hole in the dura, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is

capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

Regarding the argument that the second end of the elongate body of the bipolar coagulator in Madsen et al. has no predetermined relationship with a first predetermined diameter of a hole to be made in the dura, the Madsen et al. device inherently includes a tip having a diameter having a predetermined relationship with the first predetermined diameter, particularly in view of the fact that the "predetermined relationship" has not been defined.

Regarding the argument that Madsen et al. disclose bipolar electrodes to cauterize a lateral area between the electrodes provided in contrast to the unipolar electrode containing a tip electrode, which cauterizes the dura contacting the tip of the stylet, the electrodes of Madsen et al. are located on the tip of the device (see figure 1b). These electrodes satisfy the requirements of the claims – "means for applying an electrical current to said tip of said stylet to cauterize said dura".

### The method claims

Applicant argues that Madsen et al. does not disclose a method for making a hole in the dura of a patient for insertion of a catheter. In column 1 line 58 – column 2 line 5, Madsen et al. establishes the method as claimed as being old and well known in the art.

Art Unit: 3739

Regarding the argument that the second end of the elongate body of the bipolar coagulator in Madsen et al. has no predetermined relationship with a first predetermined diameter of a hole to be made in the dura, the Madsen et al. device inherently includes a tip having a diameter having a predetermined relationship with the first predetermined diameter, particularly in view of the fact that the "predetermined relationship" has not been defined.

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rosiland S Rollins whose telephone number is (571) 272-4772. The examiner can normally be reached on Mon.-Fri. 9:00 AM - 6:00 PM.

Art Unit: 3739

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda C. Dvorak can be reached on (571) 272-4764. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
